IDEA / APPROACH DETAILS

Problem: Students, job seekers, and professionals have no private, judgment-free way to practice speaking and get objective feedback on confidence, clarity, and emotional presence.

Solution: "The Future You" is a daily video-reflection and communication coaching platform. Users record a short video; AI analyzes speech, body language, tone, and content.

How it works:

AI Companion: A memory-aware AI coach that remembers past sessions and gives personalized, evolving growth tips and habit tracking.

Positioning: Works as both a daily habit-building tool (video journaling) and structured practice for interviews, presentations, and viva prep.

EXISTING SOLUTIONS & GAPS

connectwell
INNOVATING FOR A CONNECTED FUTURE

VES TECHNOTHON 2027

Yoodli: AI speech coach for filler words & pacing — Gap: cloud-only, paid, no body-language or emotion analysis.

Orai: Mobile speaking-practice app — Gap: no video/posture analysis, no cross-session memory.

Poised: Real-time meeting coach — Gap: built for live meetings only, not async self-practice.

BoldVoice: Accent training app — Gap: narrow focus on accent, not holistic communication.

Google Interview Warmup: Basic practice Q&A tool — Gap: no real AI feedback, scoring, or personalization.

Our gap-fill: No competitor combines multi-modal fusion (voice + body + text + emotion), fully private local AI processing, and a long-term memory-driven companion in one product.

TECHNOLOGY STACK

connectwell
INNOVATING FOR A CONNECTED FUTURE

VES TECHNOTHON 2027

Frontend: React 18, Vite, TypeScript, TailwindCSS, shadcn/ui, TanStack Query, Framer Motion, Recharts

Backend: Node.js (Express) local processor + Python AI workers

AI / ML: faster-whisper (speech-to-text), MediaPipe Pose (posture & gesture), Parselmouth/Praat (pitch & voice quality), Transformers.js + all-MiniLM-L6-v2 (semantic coherence), ONNX 11-category emotion classifier, Gemini 3.8 Flash (AI companion), Ollama Llama 4 Scout (script generator — in progress)

Database & Infra: Supabase (PostgreSQL, Auth, Storage), Vercel (frontend hosting), Render (AI worker hosting)

ESTIMATE OF MATERIALS WITH UNIT PRICES

connectwell
INNOVATING FOR A CONNECTED FUTURE

VES TECHNOTHON 2027

Total (₹): ~4,965/mo (paid scale) · ₹0/mo (MVP free tier)

Component/Material	Specification	Qty	Unit Price (₹)
Vercel Hosting (Frontend)	Pro plan (post free tier)	1	1,700 /month
Supabase	Pro plan — DB + Auth + Storage	1	2,100 /month
Render	Starter — always-on AI worker	1	590 /month
Local AI models	Whisper, MediaPipe, Parselmouth, BERT — open-source, self-hosted	1	0
Domain name	Custom domain (annual)	1	~75 /month (900/yr)
Compute (AI worker machine)	Existing development laptop	1	0 (already owned)

USPs OF YOUR IDEA

AI Companion with memory: Learns your patterns across sessions and gives tailored, evolving coaching not a one-off score.

Multi-modal fusion scoring: Voice (pitch/HNR) + body (posture/gesture) + text (coherence) + emotion, fused into one holistic report.

Authenticity / incongruence detection: Flags when body language and words don't match a "fake confidence" detector most tools don't have.

Privacy-first: Heavy AI analysis runs locally; raw video stays private; regular-user data auto-deleted within 1 week.

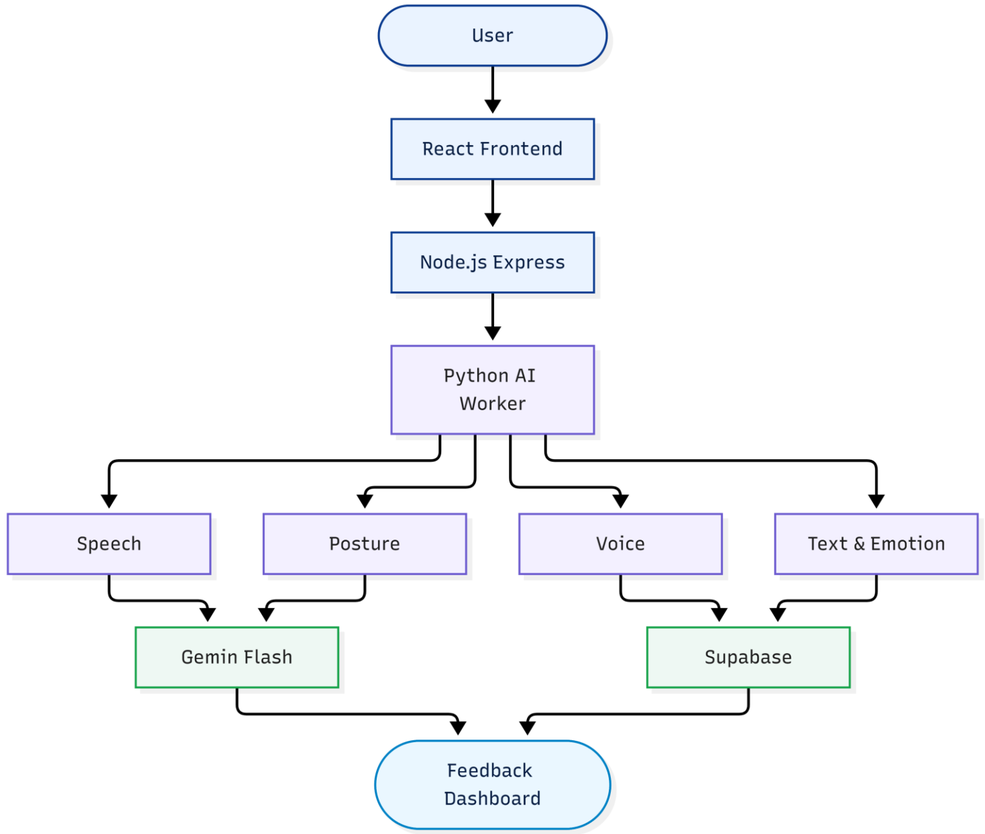

Minimal-cost AI core: Open-source local models keep the core analysis pipeline near zero-cost, unlike cloud-API-dependent competitors.

Daily habit loop: Gamified streaks and a progress dashboard built for consistent, long-term growth, not one-time use.

FUTURE SCOPE

- **Memory:** semantic memory (pgvector) for cross-session personalized coaching.
- **Reports:** Weekly / monthly progress reports and trend analytics.
- **Mobile PWA :** record and get feedback directly from a phone.
- **Interview Mode:** structured Q&A practice with role-specific scoring.
- **Language:** Multi-language support.
- **Duolingo-style gamification:** Streaks, badges, leaderboards, gaming environment and Competitiveness.
- **Programs:** Enterprise / campus licensing for placement cells and soft-skills training programs.

DEPENDENCIES / SHOW STOPPER

Show Stoppers (Critical)

These are the risks that could directly affect the MVP.

- **Always-on AI Worker**
  Local AI worker is a single point of failure until Render deployment.
- **Limited Concurrent Users**
  Current MVP supports only **5–15 users** on one worker.
- **Gemini API Dependency**
  Usage limits and API costs increase as users grow.

Challenges (Manageable Risks)

These are expected engineering and compliance considerations.

- **Subjective Confidence Scores**
  Metrics are self-comparative, not clinical measurements.
- **Supabase Free Tier**
  Storage and bandwidth require upgrading as usage grows.
- **Privacy Compliance**
  User consent is required for video storage and future training-data use.
